*Note, The Roman Account since the Year 1700*

is 11 days before us in *England*, their 12th being our first, and our last their 11th, and thus you are to understand the two Accounts, always reckoning the Forreign Account, when you read the News, to be 11 days before us, as for Example, *Paris*, *June* the 27th, this is but the 16th with us, and so observe in all the rest.

*Note, That the Exchequer opens eight days*

before any Term begins, except *Trinity-Term*, before which it opens but four days. Observe also, that the first and last days of every Term are the first and last days of Appearance.

♄ Saturn, ♃ Jupiter, ♂ Mars, ☉ Sol, ♀ Venus, ♀ Mercury, ☾ Luna, ♏ Dragons head, ♏ Dragons tail.

The Princely *Aries*, clad in his golden Wool,  
 Looks back admiring to behold the *Bull*  
 Against him rise, who with a chearful Face  
 Calls to the *Twins*, to bid them mend their pace;  
 The *Crabb* these follows, and the *Lyon* then;  
 Next the *Celestial Maid*, (not known by Man)  
*Libra* comes after, who (lest time should fail)  
 Weighs out the Days and Nights in equal Scale,  
 And calls the *Scorpion* on, who in his Train  
 Bears a bright fulgent Star, at which (in vain)  
 The *Centaur* (with his string drawn to his Ear)  
 Arms his keen Shaft; the *Goat* doth next appear,  
 That's *Capricornus* call'd, who oft-times lowres,  
 Because to quench his Star *Aquarius* powres  
 His Laver forth; next after him be plac'd  
*Pisces*, which of the twelve Signs is the last.

*A Description of the four Quarters of the Year; and first of Winter.*

*Sol in Capricorn, Aquarius, Pisces.*

**A**Ccording to the custom of Writers in this kind, *Winter* quarter is the first quarter, which took beginning the 11 day of *December*, at which time the Sun enter'd into the first degree of the cold and dry Sign *Capricorn*, being the most remote from us, in his farthest *South* Declination, causing the days with us to be shortest, and the nights longest. This quarter continues until the Sun hath slowly passed through *Capricorn, Aquarius & Pisces*, & doth naturally resemble *Old Age*.

*Of the Spring. Sol in Aries, Taurus, Gemini.*

**T**His quarter takes beginning near the 10 of *March*, at which time the Sun entereth into the first minute of *Aries*, making equal day and night; and continues whilst the Sun is passing through *Aries, Taurus*, and *Gemini*. This quarter doth resemble growing *Youth*.

*Of Summer. Sol in Cancer, Leo, Virgo.*

**T**HE Summer quarter doth take his beginning when the Sun enters into the first degree of *Cancer*, which will be this Year on the 10 of *June*, and continues whilst the Sun passeth through *Cancer, Leo, Virgo*. Now the Days are longest, and the Air hottest; therefore, but for necessity, bid Physick adieu.

*Of Autumn. Sol in Libra, Scorpio, Sagittarius.*

**A**utumn, or Harvest quarter (commonly called the Fall of the Leaf, of some the latter Spring) begins when the Sun enters into the first degree of *Libra*, again making the Day and Night of equal length, which will be this Year the 12 of *September*, and continues while the Sun passes thro' *Libra, Scorpio*, and *Sagittarius*. This quarter doth fitly resemble *Declining Age*, and *Phlegmatick Complexion*.

The Geographical description of Ways from one notable Town to another, over all *England*, and thereby how to Travel from any of them to the City of *London*, set forth after a new Order.

**N**OTE that the Figures in the Rows under this Mark ¶, is the distance of that Town they stand against, from *London*, or from the Town you are directed unto.

From *Tork* to *London*,  
150 Miles.
